The QAM Modulator and Demodulator IP cores, provided by UTS are FPGA proven high data rate QAM IP solution. These IP cores can use for modulating data signals onto a carrier used for radio communications. QAM is a signal in which two carriers shifted in phase by 90 degrees are modulated and the resultant output consists of both amplitude and phase variations.

UTS - QAM Modulator and Demodulator IP core

QAM Modulator IP Core isample 32 bandwidth control (symbol rate): 0.01% to 25% of iclk odati W_DAC modulator output at baseband (I channel) or at an intermediate frequency odatq W_DAC modulator output at baseband (Q channel) ordy 1 ready to accept input data IP Core Parameters Table 2 describes the QAM Modulator IP Core parameters, which

QAM Modulator FPGA IP Core - IPrium

QAM Modulator FPGA IP-Core DVB-C Modulation According to ETSI-EN 300429 V1.2.1 • Constellations: QAM16, QAM32, QAM64, QAM128, QAM256 • Symbol rate: 1000-7000 ksym/s • Implementation using a single 27MHz crystal • Integrated IF upconverter and interpolation filter • IF output adjustable between 3.5MHz and 70MHz

QAM Modulator FPGA IP-Core - maintech

Where To Download Qam Modulator Fpga Ip Core Iprium Qam Modulator Fpga Ip Core The QAM Modulator and Demodulator IP cores, provided by UTS are FPGA proven high data rate QAM IP solution. These IP cores can use for modulating data signals onto a carrier used for radio communications. QAM is a signal in which two

Qam Modulator Fpga Ip Core Iprium

Qam Modulator Fpga Ip Core The QAM Modulator and Demodulator IP cores, provided by UTS are FPGA proven high data rate QAM IP solution. These IP cores can use for modulating data signals onto a carrier used for radio communications. QAM is a signal in which two carriers shifted in phase by 90 degrees are

Qam Modulator Fpga Ip Core Iprium - cbfp.uminho.pt

DVB-C Modulator IP (FPGA Proven) This is a Single-channel Cable Modulator that encodes a transport stream for J63 or DVB-C. The resulting QAM-symbols are filtered and up-converted for output to the radio interface as a single I/Q sample stream for translation to the final RF frequency.

DVB-C Modulator IP (FPGA Proven) IP Core

The MVD DVB-C Modulator J.83 Annex A/C core is a drop-in module for FPGA that includes the following functions: Input data framer from DVB-SPI source (MPEG-TS flow) J.83AC modulator: Energy dispersal; Reed Solomon encoder; Interleaver; QAM symbol mapper; Output for complex DAC (2 x 8 bits) Features

QAM modulator - DVB-C J.83 Annex A/C modulator - IP core ...

This IP can provide parallel complex I/Q signals to input to a pair of DACs, or an interpolating DAC device such as the AD9857, AD9957 or AD9789. Optionally the output can be selected as an IF to supply a single DAC. Operation The IP core provides software register settings, e.g. FEC mode and symbol rate. Further software registers are provided to define the IF frequency at the modulator output.

DVB-C Modulator IP (Silicon/FPGA Proven)

DVB-T Modulator FPGA IP Core Subject: DVB-T Modulator IP Core Specification (dvbt-modulator) Keywords: dvb-t modulator ofdm qpsk 16-qam 64-qam reed-solomon convolution viterbi tv terrestrial ip core iprium modulation Created Date: 6/29/2020 12:39:27 PM

DVB-T Modulator FPGA IP Core - iprium.com

QAM Modulation according to ETSI EN 300 429 V1.2.1. 16 DVB-C channels to 7000 kSym/s max. Signal quality: MER > 44dB. Input: MPEG2 transport stream. Output on AD9739 (or similar DAC) Channels can be chosen freely in a frequency range between 50 and 950 MHz. Output level of each channel can be attenuated individually.

DVB IP-Cores - maintech Homepage: MultiFM Modulator

The CMS0024 Cable (QAM) Modulator is fully compliant with the European, US, and Japanese downlink cable standards DVB-C and J.83, providing all the necessary functions between transport stream input and QAM output. The core can be configured to support from one to four FDM channels with additional (independent) channels accommodated by the ...

Cable (QAM) Modulator | FPGA Central

Modulators / Demodulators. The IP Core implements the QAM modulation with filtering and signal interpolation. Mapper Pulse Shaping Filter Resampler Quadrature Modulator NCO DDS Version : 4.0 Build date : 2014.09 Ordering code : ip-qam-modulator Supported technologies : FPGA (Xilinx, Intel/Altera, Lattice, Microsemi/Actel), ASIC (Digital ASIC)

QAM Modulator IP Core - FPGA IP Cores, wireless modems, FEC

Our universal QAM/PSK modulator core is aimed at broadband point-to-point and point-to-multipoint applications and supports QAM orders from 2 (BPSK) to 256. It is compatible with the IEEE 802.16.x wireless MAN-SC and 802.15.3 wireless PAN Standards, and provides a comprehensive range of synthesis options to allow optimal trade-off between gate-count and feature set.

Universal QAM/PSK Modulator IP Core - Design And Reuse

This IP can provide parallel complex I/Q signals to input to a pair of DACs, or an interpolating DAC device such as the AD9857, AD9957 or AD9789. Optionally the output can be selected as an IF to supply a single DAC. Operation The IP core provides software register settings, e.g. FEC mode and symbol rate.
