Let f be defined by $f(x) = 0$ if x is irrational and $f(x) = 1$ if x is rational. For any subdivision $a = x_0 < x_1 < \dots < x_n = b$ of $[a, b]$, $M_i = \sup_{x_{i-1} < x < x_i} f(x) = 1$ and $m_i = \inf_{x_{i-1} < x < x_i} f(x) = 0$ for each P_n . Thus $S = \sum_{i=1}^n (x_i - x_{i-1})M_i = b - a$ and $s = \sum_{i=1}^n (x_i - x_{i-1})m_i = 0$ for any subdivision of $[a, b]$.

Royden Real Analysis 4th Edition Solution Manual 5. Suppose f is a bounded, real valued function on $[0;1]$. Show that f is Lebesgue measurable if and only if $\sup Z \int dm = \inf Z \int dm$ where m is Lebesgue measure on $[0;1]$, and Z range over all simple functions, $f \geq Z$. Solution: This is proposition 4.3 of Royden, 3ed. [6].

Real Analysis, 4th Edition, covers the basic material that every graduate student should know in the classical theory of functions of a real variable, measure and integration theory, and some of the more important and elementary topics in general topology and normed linear space theory. This text assumes a general background in undergraduate mathematics and familiarity with the material covered in an undergraduate course on the fundamental concepts of analysis.
