result of a pressure control problem within the Renault transmission unit caused by either the solenoids or the valve body. Commonly, when a Renault with a DPO gearbox fault is brought into the workshop, a common Renault gearbox complaint is that when the Renault is running from a cold start, it will sometimes become stuck in third gear, the Renault going into 'limp mode'.

Problems - Richard Hall
Sounds to me as if it
could be clutch drag -
clutch not disengaging
fully, probably due to the
clutch plate sticking on
the gearbox shaft splines.
This could well give an
intermittent gear
engagement problem,
especially when stationary
and when the gearbox has
warmed up.

transmission, gearbox problems can affect both the operation of the vehicle as well as its safety. Gearbox problems can be expensive to fix and the earlier they are diagnosed, the quicker you can get back on the road. Due to the complexity of the Renault gearbox, finding accurate answers to questions can be difficult.

A physical inspection of the connections is the

only way to find the cause. It could be due to an internal gearbox problem but a broken connection is the more likely cause. The sophistication of both the manual and automatic Renault gearbox means that uninformed attempts to repair problems can often do more harm than good.
