How a Sensored

vs Sensorless

Brushless

Motor Works A

brushless motor

receives power

**from the
electronic
speed control.
(ESC) The
speed control
must know the
position of the
rotor in order
to accelerate
the motor from
zero RPM
smoothly. When
it does not**

**know the
position of the
rotor, the ESC
must determine
it.**

Controller

A sensorless brushless DC motor (sensorless BLDC motor) is quite simply a brushless DC motor without hall effect sensors. Hall effect sensors are sensors

which are built into sensored brushless motors which are used to tell the brushless motor controller exactly where the rotor position is.

Brushless

Speed

Controller

A sensorless

brushless DC

motor

(sensorless

BLDC motor) is

quite simply a

brushless DC

motor without

hall effect sensors. Hall effect sensors are sensors which are built into sensored brushless motors which are used to tell the brushless motor controller exactly where
