$1(2?t)2(3?t)2+c. 2(1?t) (3?t)2+c. 3(1?t)2(2?t)2= 0$ on $(?1,1)$. The left-hand side of the above equation is a polynomial of degree at most four, which can have four zeros at most, unless it is the zero polynomial. Equating the ?rst three coe?cients to zero yields the following homogeneous system of linear equations c.

Solutions Manual A First Course in Differential Equations ...

Fundamentals of Differential Equations presents the basic theory of differential equations and offers a variety of modern applications in science and engineering. Available in two versions, these flexible texts offer the instructor many choices in syllabus design, course emphasis (theory, methodology, applications, and numerical methods), and in using commercially available computer software.
