Rheology is a branch of physics, and it is the science that deals with the deformation and flow of materials, both solids and liquids.*

Understanding the influence of magnetic fields on the rheological behavior of flowing cement paste is of great importance to achieve active rheology control during concrete pumping. In this study, the rheological properties of cementitious paste with water-to-cement (w/c) ratio of 0.4 and nano-Fe3O4 content of 3% are first measured under magnetic field.

Study Of Rheological Properties of Industrial Lubricants This study aims to investigate the effect of glycosylation on the rheological properties of heat-induced WPI gelling, such as the development of modulus during the gelation process and the frequency sweep on the formed gels. 2. Materials and methods 2.1.

Rheological studies are important for the design of unit operations, high quality assurance of foods and beverages and process optimization. In addition, rheological approaches are employed mainly as essential tools for food engineering, since rheology is linked to food processing and stability, as well as to sensory perceptions.

The pipeline transport characteristics of ICPB need to be investigated to promote its application, which are influenced by the rheological properties. The objective of this study is to investigate the rheological properties of ICPB by means of experimental and computational fluid dynamics (CFD) methods. The rheological parameters were measured using a rheometer and the slump test was performed in a cylinder slump.

A new precise, and objective rheometrical method was developed for evaluating flow properties, which enables one to check quality and stability of margarines over a wide temperature interval just in the course of their production, and this may be helpful during the optimization of technology processes and standardization of product quality.

However, these researchers are aimed to study on function properties of rice starch, and its functional properties incompletely replace the physicochemical properties of the whole rice grain. Ahmed et al studied the thermal and dynamic properties of rice starch and discovered significant differences between rice starch and rice flour . In general, due to the differences among varieties, regions and environments, the content of basic components in rice grain varies significantly.

Abstract. We examined changes in rheological properties of nonequilibrated spin-coated thin films of isotactic polystyrene (iPS) and isotactic poly (para- methylstyrene) and blends thereof by dewetting experiments. For 200 nm thick films and a systematic variation of dewetting temperature, we focused on changes in the amount of residual stresses and the corresponding relaxation times as a function of iPS content.

After the HPCD process, the foaming properties and emulsifying properties of LWE may change. Precisely because of its excellent technical features, LWE is widely applied in the food industry as an important food ingredient. However, there is still no study about the influence of HPCD treatment on the processing quality characteristics of LWE.
