Abstract. This article contributes a comprehensive literature review fulfilling the identified need for a systematic empirical study examining how well the mechanisms of supply chain collaboration (SCC) correspond with performance. A review of articles during the period of 2000–2017 reveals fundamental trends in adopted methodologies, scopes of SCC, and areas of performance.

This dissertation investigates supply chain collaboration. Supply chain collaboration is defined as a long-term relationship where participants generally cooperate, share information, and work together to plan and even modify their business practices to improve joint performance (Whipple et al., 2010). Analyzing supply chain collaboration provides researchers further understanding of the concept as we seek to move the body of knowledge related to supply chain collaboration forward.
