provided to tailor TxDOT's design practices to meet the requirements of the LRFD Specifications.

Detailed design examples for an AASHTO Type IV girder using both the AASHTO Standard Specifications and AASHTO

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

LRFD Specifications are developed and compared. These examples will serve as a reference for TxDOT bridge design engineers. A parametric study for AASHTO Type IV and Type C girders is conducted using span

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

length, girder spacing, and strand diameter as the major parameters that are varied. Based on the results obtained from the parametric study, two critical areas are identified where significant changes in design

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

results are observed when comparing Standard and LRFD designs. The critical areas are the transverse shear requirements and interface shear requirements, and these are further investigated. The interface shear reinforcement

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

requirements are observed to increase significantly when the LRFD Specifications are used for design. New provisions for interface shear design that have been proposed to be included in the LRFD Specifications in 2007

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

were evaluated. It was observed that the proposed interface shear provisions will significantly reduce the difference between the interface shear reinforcement requirements for corresponding Standard and LRFD designs. The

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

transverse shear reinforcement requirements are found to be varying marginally in some cases and significantly in most of the cases when comparing LRFD designs to Standard designs. The variation in the transverse shear

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

reinforcement requirement is attributed to differences in the shear models used in the two specifications. The LRFD Specifications use a variable truss analogy based on the Modified Compression Field Theory

Online Library The Aashto Lrfd
Bridge Design Specifications
Section 5

(MCFT). The Standard Specifications use a constant 45-degree truss analogy method for its shear design provisions. The two methodologies are compared and major differences are noted.

Engineering

Glass fiber reinforced polymer (GFRP) materials have emerged as an alternative material for producing reinforcing bars for concrete structures. GFRP reinforcing bars offer advantages over steel reinforcement

Online Library The Aashto Lrfd Bridge Design Specifications Section 5

due to their noncorrosive nature and nonconductive behavior. Due to other differences in the physical and mechanical behavior of GFRP materials as opposed to steel, unique guidance on the engineering and construction of concrete bridge decks

Online Library The Aashto Lrfd Bridge Design Specifications Section 5

reinforced with GFRP bars is needed. These guide specifications offer a description of the unique material properties of GFRP composite materials as well as provisions for the design and construction of concrete bridge decks and railings reinforced
