[Transplantation of the Liver | ScienceDirect](#)

A liver transplant is an operation to remove your liver and replace it with a healthy one from a donor. It may be recommended if your liver has stopped working properly (liver failure) and other treatments cannot help.

[Liver transplant - NHS](#)

Liver transplantation. A liver transplant is an operation where your diseased liver is removed and replaced with a healthy donor human liver. Although liver transplants are now quite common, the operation is not undertaken lightly. It is a major operation and the body will always see the 'new' liver as a foreign agent and will try to destroy it. You may need a liver transplant if your liver is damaged to the point where it is unable to repair itself and

is likely to fail completely.

Liver transplantation - British Liver Trust

Liver transplantation or hepatic transplantation is the replacement of a diseased liver with the healthy liver from another person. Liver transplantation is a treatment option for end-stage liver disease and acute liver failure, although availability of donor organs is a major limitation. The most common technique is orthotopic transplantation, in which the native liver is removed and replaced by the donor organ in the same anatomic position as the original liver. The surgical procedure is compl

transplantation of the liver 3e

The most common form of liver transplant in the UK is a whole liver into an adult recipient, but split liver transplantation is also performed and allows a child and a small adult to each get a transplant from a single donor. There is increasing popularity of living donor liver transplants where a split of the liver is donated.

Liver - ODT Clinical - NHS Blood and Transplant

Liver replacement (orthotopic transplantation) (Fig 1-3) was first mentioned by Jack Cannon of the University of California, Los Angeles, who speculated that because the liver played an important role in rejection, it might refrain from contributing to its own repudiation.

Transplantation of the Liver - D-Scholarship@Pitt

The various functions of the liver are carried out by the liver cells or hepatocytes. The liver is thought to be responsible for up to 500 separate functions, usually in combination with other systems and organs. Currently, no artificial organ or device is capable of reproducing all the functions of the liver.
