Unit 4: Homeostasis (17 hours) Students will describe and explain the physiological and biochemical mechanisms involved in the maintenance of homeostasis. Analysis will be made, through experiments and the use of models, of the feedback mechanisms that maintain chemical and physical homeostasis in animal systems.

14.4) Homeostasis Homeostasis: is the maintenance of a constant internal environment. Homeostasis is the control of internal conditions within set limits: Cells: change composition of blood as they remove nutrients and O2 and add wastes and CO2. Heart: keeps blood pressure constant to deliver oxygen and nutrients around body. Skin: to maintain heat exchange [...]
