awk(1p) - Linux manual page

Like most UNIX utilities, AWK is line oriented. That is, the pattern specifies a test that is performed with each line read as input. If the condition is true, then the action is taken. The default pattern is something that matches every line.

Awk - A Tutorial and Introduction - by Bruce Barnett

AWK splits each record into fields, based on the field separator specified in the FS variable. The default field separator is one-or-several-white-space-characters (aka, spaces or tabs). With those settings, any record containing at least one non-whitespace character will contain at least one field.
