Execute Unix Shell Programs If you are willing to learn the Unix/Linux basic commands and Shell script but you do not have a setup for the same, then do not worry — The CodingGround is available on a highend dedicated server giving you real programming experience with the comfort of singleclick execution.

UNIX / LINUX Tutorial - Tutorialspoint

In computing, a shell is a computer program which exposes an operating system's services to a human user or other program. In general, operating system shells use either a command-line interface (CLI) or graphical user interface (GUI), depending on a computer's role and particular operation. It is named a shell because it is the outermost layer around the operating system.

Shell (computing) - Wikipedia

A shell is special user program which provide an interface to user to use operating system services. Shell accept human readable commands from user and convert them into something which kernel can understand. It is a command language interpreter that execute commands read from input devices such as keyboards or from files.
