### Zygomatic Implants The Anatomy D Approach

Zygomatic Implants: The Anatomy-Guided Approach ... Zygomatic implants are anchored in the cheek bone which is called the “zygoma” in human anatomy textbooks. The extra-long implant is placed from inside the mouth near the location of the bicuspid teeth. It goes through or right next to the sinus and anchors into the thick and solid zygomatic bone.

### Zygomatic Implants The Anatomy D Approach

Zygoma implants take the anchorage from the zygoma/zygomatic bone (cheek bone). The Zygomatic bone is denser in quality and more cortical in nature than posterior maxillary bone. [5] Because of the sturdy anchorage achievable in the dense bone of the zygomatic region, and the wide stress distribution achieved on these tilted implants, a prosthesis can often be immediately placed at the time of surgery . [6]

### Zygoma implant - Wikipedia

Zygomatic implants were designed by Per-Ingvar Brånemark to allow for implant-supported prosthesis placement where maxillary bony support for prosthetic rehabilitation is inadequate.
